down to patrol	soldiers of the y patrol along the dirt road at or, Svilengrad, continuing between the right bank of the river, has gone along this road for a ff on a small path to the right	en the mastava and the Mari about 4-5 meters from it. I distance of about 8wo kild	of the "Gebran" tsa River and After the

after that, turns due south. This path runs by a spring known by the residents as "Nenkin Milchovo Spring," turns east around the "Diden Baba" area (N hl-hh, E 26-11) and continues in a southerly direction until it runs into the footpath which parallels the border line and is about 50 meters from the road.

2. The whole route runs through a level cultivated area and partly through mulberry and fruit orchards and the approaches to the border itself are for the most part through the mulberry orchards.

the an gra pat	the eastern angle formed by the above-mentioned route and the path paralleling border line (N 41-45, E 26-12) are located thick mulberry orchards, covering area of about 4-5 decares (untended for a long time), overgrown with tall ass. In this orchard, about 50 meters east of the road on which the guards trol and about 100 meters from the border line, along the above-mentioned th, is concealed a fixed Border Guard "Sekret" (ambush).
the	at 11:00-11:30 a.m. the change of morning guard, probably the second shiftinspection of guard by an officer (probably was the zastava commander) accompanied by soldier. I
ac	e Border Guard patrol consisted of three Border Guards, two armed with sub- thine guns. Once it was concealed in the mulberry orchard, the patrol could be seen.
(N	border line from Kapitan dreevo village (N 41-43, E 26-19), Svilengrad Okoliya, to Mezek village 41-44, E 26-05), Svilengrad Okoliya, observed in the fall of 1949:
i.	From Kapitan Andreevo village, Svilengrad Okoliya, as far as the large bend of the Maritsa River (N 41-45, E 26-13), the border line is the Maritsa River itself; on the Bulgarian shore there has been constructed no kind of breastworks or technical equipment aimed at making access more difficult or at signaling the arrival from any direction of trespassers of any type;
•	From N 41-44, E 26-13 to the point where the railroad line crosses the border line (N 41-44, E 26-10) is a barren area about 50 meters deep; the total length along the border line has mainly mulberry thickets and other trees; along with the trees, brush has been piled up along the Bulgarian side in this section, thus forming a sort of fence of branches and trees about two meters high which, however, appears to have been done some time ago; there is no barbed wire or plowed strip in this section of the border line
•	From the place where the rail line crosses the border (N 41-44, E 26-10) to N 41-42, E 26-06 (a point located south of Mesek village (N 41-44, E 26-05), Svilengrad Okoliya), the border line is formed entirely by a small river (name unknown); for the whole length along this stretch on the Bulgarian side border surveillance posts were constructed in November 1949; first of all strips about 50 meters deep were cleared in the wooded areas through which the border line runs; after, a strip was plowed, located about five meters from the Bulgarian bank of the small river and extending about 10 meters; after this, holes were excavated; on the inside edge (toward Bulgaria) and along the whole length (from the railroad line

sists of one central row of posts each about two meters high set at intervals of three meters; on the two sides of this row and about 1.5 meters in each direction between every two large posts, were set two additional rows

mine fields were placed between "Gebran" Quarter of Swilengrad and the railroad line, at the point near the border line. These mine fields were constructed in 1948, The mine fields are located in the meadows between the railroad line and the "Gebran" Quarter of Swilengrad or, more exactly, envelop the road itself and the place where it borders (on the right and left) the first part of "Gebran" Quarter and run right up to the railroad bridge, located at the point where the railroad line crosses the border, as well as along the total length of this road, after which they run southwest from "Gebran" Quarter gardens and through the meadows. From there the mine fields extend to the above-mentioned railroad bridge and have a length along the road of about 1.5 kilometers and go southeast from the road in the swamp area. The mine field is about 25 meters in depth, that is, about 10 meters deep on each side of the road. This is not the only mine field, but there are several similar ones along the above-mentioned road, with varying distances between them. These are fenced in by a low barbed wire fence (one strand) which at the beginning (and probably at the end) of every one is posted with little signs "dangerous to life" or "mine fields." The mines are probably infantry type, since the villagers say they will blow up even if a dog walks over them. In the summer of 1949 there was one casualty,		CONFIDENTIAL
